

## BOLDENONE UNDECYLENATE

Product ID: G13103349

Form Inject

Concentration 200mg/mL

Schedule CIII - Rx Only

Route Of Adm. Intramuscular

Boldenone Undecylenate, also known as testosterone 1-dihydrotestosterone or androsta-1,4-dien-3-one-17 $\beta$ -ol (educational name Equipoise). Boldenone Undecylenate is a long-acting injectable anabolic agent. Boldenone's activity is mainly anabolic with a low androgenic potential. Boldenone can increase nitrogen retention, protein synthesis, increases appetite and stimulates the release of erythropoietin in the kidneys. Boldenone was synthesized in an attempt to create a long-acting injectable methandrostenolone (Dianabol) for androgen deficiency disorders. Boldenone acts similarly to methandrostenolone with less negative androgenic effects. Although often compared to nandrolone, boldenone exempted the progesterone receptor interaction and all associated progestogenic side effects. Boldenone Undecylenate (Injection) is used as a builder in the treatment of weakened constitution when an improvement in weight, coat or general physical condition is desired. Weight loss often follows illness or may occur after overwork and overexertion. Boldenone improves the general condition of the weakened body, helping to correct weight loss and improve appetite, increasing muscle mass. It is not a substitute for a well-balanced diet. Best results can only be expected when physical activities and nutritional practices are made.

### Storage Conditions and Warnings

DO NOT REFRIGERATE OR FREEZE  
KEEP OUT OF REACH OF CHILDREN  
STORE IN A COOL, DRY PLACE BETWEEN 15-25°C (59-77°F)  
PROTECT FROM LIGHT AND MOISTURE  
USE ONLY AS DIRECTED BY A HEALTHCARE PROFESSIONAL
