

TESTOSTERONE CYPIONATE

Product ID: G58208

Form Inject

Concentration 200mg/mL

Schedule CIII - Rx Only

Route Of Adm. Intramuscular

Testosterone Cypionate is another ester of the testosterone hormone and is one of the most widely used esters by bodybuilders and athletes. Testosterone Cypionate has a half-life of about 10 to 12 days so is a slower release steroid that is usually used in longer cycles of up to 14 weeks.

Testosterone Cypionate is responsible for promoting health and well-being through enhanced libido, energy, immunity, increased fat loss, gaining and maintaining lean muscle mass, preventing Osteoporosis (loss of bone density), and possible protection against heart disease.

Testosterone Cypionate is also responsible for normal growth and development of male sex organs and maintenance of secondary sex characteristics. Testosterone Cypionate binds to the Androgen Receptors (AR), which thus caused accelerated muscle gain, fat loss, and muscle repair and growth. These mechanisms are stimulated by activation of the Androgen Receptors (either directly or as DHT), as well as through a hormonal cascade.

Storage Conditions and Warnings

DO NOT REFRIGERATE OR FREEZE
KEEP OUT OF REACH OF CHILDREN
STORE IN A COOL, DRY PLACE BETWEEN 15-25°C (59-77°F)
PROTECT FROM LIGHT AND MOISTURE
USE ONLY AS DIRECTED BY A HEALTHCARE PROFESSIONAL
