

TRENBOLONE HEXAHYDROBENZYL CARBONATE

Product ID: G23454333

Form Inject

Concentration 75mg/mL

Schedule CIII – Rx Only

Route Of Adm. Intramuscular

An even more potent form of Nandrolone is achieved with modifications to Tren Hex (Trenbolone Hexahydrobenzylcarbonate) and has an extremely high anabolic and androgenic rating compared to regular testosterone. Tren Hexa is rated at 500 for both anabolic and androgenic properties, while testosterone is rated for both. It is 100. It is one of the most powerful steroids on the market and has tremendous versatility. Compared to the more commonly used form of Trenbolone/Parabolan, it is a longer-lasting and slower-releasing ester, which may provide some benefits for users who do not want more frequent injections of Trenbolone acetate.

Aside from this difference in the attached ester, the steroid structure of both forms of Trenbolone is the same, resulting in both having the same effects on the body. This is a steroid with some drawbacks and many benefits that you are familiar with when it comes to steroids. But while some of Tren Hex's side effects can be concerning, some of the most familiar steroid-induced effects are less likely to cause problems; the most important of which is the lack of estrogenic activity. Like all forms of Trenbolone/Parabolan, it is a steroid with versatile uses and worth looking at even if gaining massive mass is not your primary goal.

Storage Conditions and Warnings

DO NOT REFRIGERATE OR FREEZE
KEEP OUT OF REACH OF CHILDREN
STORE IN A COOL, DRY PLACE BETWEEN 15–25°C (59–77°F)
PROTECT FROM LIGHT AND MOISTURE
USE ONLY AS DIRECTED BY A HEALTHCARE PROFESSIONAL
