

TRESTOLONE ACETATE

Product ID: G6157875

Form Inject

Concentration 100mg/mL

Schedule CIII - Rx Only

Route Of Adm. Intramuscular

Trestolone, also known as 7 α -methyl-19-nortestosterone (MENT), is an experimental androgen/anabolic steroid (AAS) and progestogen drug under development for potential use in androgen replacement therapy for low testosterone levels in men. It is the best of all steroids. It is a steroid; It is the best research compound on the market right now in terms of its ability to help users gain a lot of muscle mass in the shortest possible time. Because Ment is safer on your lipids than most other compounds, especially those taken in injectable form, you can gain good bulk while easily combating side effects. Seems like a good compound for people who want it.
